TIETOEVRY CREATE

SBOM with Eiffel Protocol

Eiffel Summit 2025

Helena Slívová

Our focus

- 1. SBOM benefits of having one
- 2. How it can be used?
- 3. Melting with Eiffel Protocol
- 4. Your needs

🚅 tietoevry

Software Bill Of Material

Detailed inventory of software product showing what other software is

included.

Increase of software security

Managing software security vulnerabilities

Addressing licensing issues

Lowering supply chain risks

```

Software lifecycle

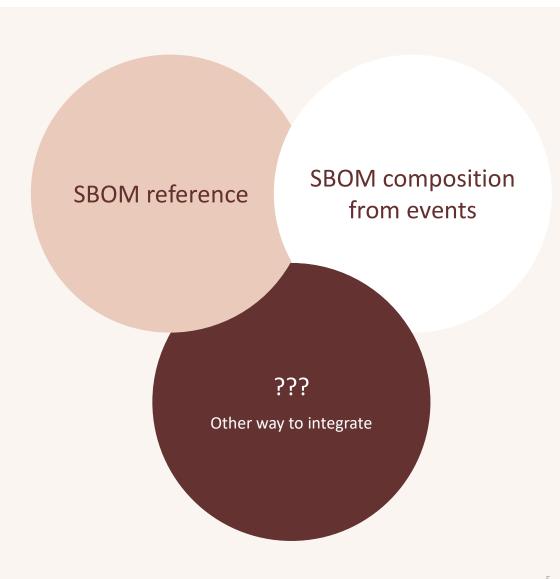

SBOM can be generated at different moments of software development lifecycle

	Development	Build	Test	Deployment	Runtime
		• • • • • • • • • • • • • • • • • • • •			• • • • • • • • • • • • • • • • • • • •
Pros	Declared dependencies Easy to automate	All dependencies resolved Integrated in CI/CD pipelines	Reflects real environment Compare with Dev/build results	Production-like Release time compliance	Highly precise Zero trust Runtime compliance
Cons	Transitive dependencies not resolved Runtime env not considered	Unused dependencies Harder tracking of exact source	Not all environments are complete	Harder to track back to build time artifacts	Complexity Performance Security implications

♣. tietoevry

Melting with Eiffel protocol

Event based CI/CD solution directly challenges the thinking if there could be way how to use those events together with SBOM creation at various states of software development and deployment.

♣. tietoevry

SBOM reference

Reference to existing SBOM passed as link within event sent over CI/CD pipeline

Protocol evolution

Modification of existing events

BuildEvent – adding reference to SBOM

DeploymentEvent – to include reference to SBOM of deployed version ensuring traceability

Standardize SBOM metadata

Component information

Vulnerabilities

Generator metadata

SBOM reference

Reference to existing SBOM passed as link within event sent over CI/CD pipeline

Protocol evolution

SBOM as an artifact

```
"eventType": "ArtifactLinkEvent",
"timestamp": "2025-09-09T16:12:45Z",
"artifact": {
    "name": "build-123456-sbom",
    "type": "SBOM",
    "location": "https://sbom-repository.com/sbom/123456"
}
```

tietoevry

SBOM composition from events

Eiffel events passing through CI/CD pipeline and serving as source for SBOM composition

Protocol evolution

EiffelCompositionDefinedEvent – use to model component grouping for a product

EiffelArtifactCreatedEvent – modify to carry component SBOM related metadata

EiffelSBOMGeneratedEvent – new event to be triggered when specifically needed

SBOM composition from events

Eiffel events passing through CI/CD pipeline and serving as source for SBOM composition

Protocol evolution

Benefits

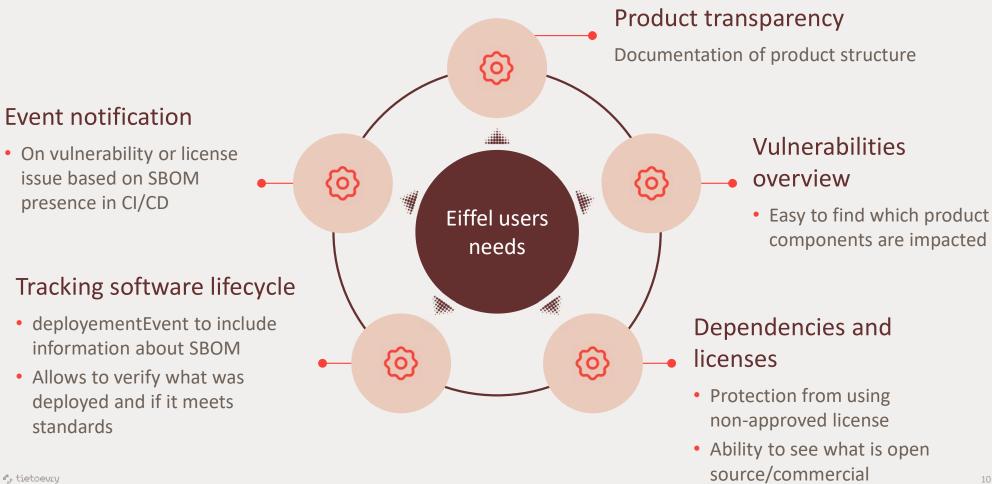

No extra SBOM scan step

Versioned and traceable

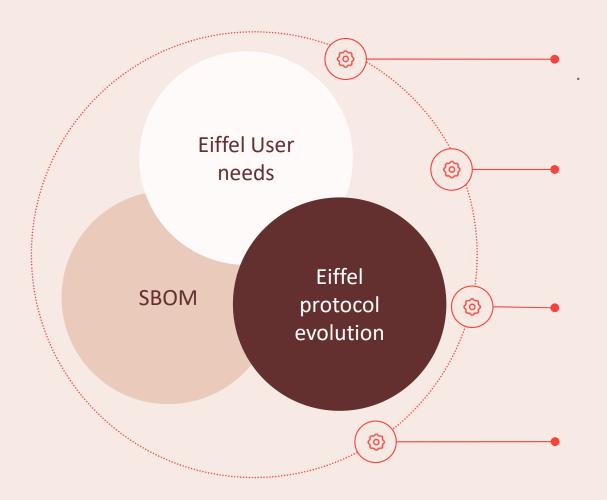

Composable

Scalable

What are Eiffel users needs?

Union

Brainstorm

Thank you
